

FILBERT CHIUMAN

ABOUT ME

Hello! My name is Filbert, a third-year university esa unggul student (5th semester on way to 6th) with a strong passion for Web Development and Data Engineering. Driven by curiosity and dedication, I enjoy learning new technologies and honing my skills through hands-on experience. My goal is to contribute meaningfully to real-world projects while continuously growing as a developer and engineer.

EXPERIENCE

Crawling Data and Visualisation 2023

Implemented a data crawling project for YouTube using Java and Python, leveraging the YouTube API for efficient data extraction. The project involved retrieving video metadata, comments, and analytics data to support research and analysis. Designed robust scripts for automated data collection, ensuring accuracy and scalability, while optimizing API usage to meet project requirements. The collected data was processed and visualized using Gephi, enabling insightful analysis of network relationships and audience interactions. The project emphasized efficient API utilization, data accuracy, and the creation of clear, impactful visual representations for data-driven decision-making.

Mental Mind 2023

Developed a "Mental Mind" project utilizing Java GUI to create a user-friendly application aimed at assessing stress levels among college students. The application identifies stress categories as mild, moderate, or high, providing valuable insights into students' mental health conditions. This project involved designing an intuitive interface, implementing data analysis features, and integrating psychological assessment methods to ensure accurate and reliable results.

Archipelago Zoo Website 2024

Contributed to the development of the Archipelago Zoo Website by assisting in designing user flow and implementing the front-end structure using HTML and CSS. Focused on creating an intuitive and visually appealing interface to enhance user experience and ensure seamless navigation throughout the website.

Data Wearhouse and Data Mart For Flat DB Price in Singapore 2024

Developed a data mart and data warehouse utilizing "Flat DB Price in Singapore" data, leveraging Pentaho for ETL processes and data integration. The project aimed to generate Key Performance Indicators (KPIs) to support strategic decision-making and analyze price trends over the years. Implemented a robust system to provide data-driven insights and a clear understanding of historical pricing patterns for future planning.

EXPERTISE

- Leadership
- Creativity
- Public Speaking
- Negotiation

LANGUAGE

- English
- Indonesia

EDUCATION

Universitas Esa Unggul

Faculty of Computer Science
2022 – Present (Expected 2026)
GPA: 3.69 of 4.0

SKILLS SUMMARY

Programming Language : Python, Java, Javascript.

Web Development : HTML, CSS.

Data Visualization : MySQL.

UI UX Design : Figma.
